

Statement of Work

Fax Portal Development — Web-Based Fax Management System

Prepared for:	Harry Fischer, H&F Communications, Inc.
Prepared by:	Momentum Link Professionals
Author:	Aberham Ekstein
Date:	April 21, 2026
Document ID:	MLP-SOW-2026-0421

1. Project Overview

Momentum Link Professionals will design, develop, and deploy a modern, secure, web-based fax portal for H&F Communications, Inc. The portal will provide end users with a professional interface to send, receive, and manage faxes — replacing the current email-based workflow with a dedicated application that offers real-time status tracking, contact management, cover page templates, and bulk sending capabilities.

The system will integrate with the existing FaxBack NET SatisFAXtion fax server infrastructure already deployed on H&F Communications' server environment. The portal will operate as a standalone application alongside the fax engine, requiring no modifications to the existing fax server.

The portal is designed with HIPAA compliance in mind, incorporating encryption, role-based access controls, audit logging, and secure authentication through Microsoft Entra ID (Azure Active Directory).

2. Scope of Work

2.1 User Portal

A fully featured web portal accessible via modern browsers with the following capabilities:

- Secure login with custom-branded sign-in page and optional Microsoft (Entra ID) single sign-on
- Dashboard with real-time fax queue overview, unread counts, and recent activity
- Send fax — compose and send with file attachments (PDF, TIFF, Word, text), recipient selection, and cover page options
- Bulk send — send the same fax to multiple recipients via CSV upload or manual entry
- Inbox — view, preview, and download received faxes as PDF with read/unread status
- Sent items — review sent fax history with full transmission details (duration, pages, speed, errors)
- Live status — real-time monitoring of faxes currently in progress with ability to cancel
- Contacts — manage a personal address book with groups, favorites, search, and CSV import/export
- Cover pages — upload and manage RTF cover page templates with dynamic placeholder fields (sender name, recipient, date, subject, etc.)
- Fax history and archive — searchable archive of all sent and received faxes with export to CSV
- User settings — notification preferences, default cover page, display preferences

2.2 Administration

Administrative functions for office staff and system managers:

- User management — link portal users to fax accounts, assign roles (User, Manager, Admin)
- System health dashboard — fax server connection status, queue statistics, error monitoring
- Domain-level cover page template management

2.3 Security & Compliance

- HIPAA-aligned technical safeguards: TLS encryption, encrypted storage, access controls, automatic session timeout
- Comprehensive audit logging of all user actions (login, send, view, download, delete)
- Role-based access control — users can only view their own faxes
- Multi-factor authentication support via Entra ID conditional access policies
- Six-year audit log retention capability

2.4 Integration

- Seamless integration with the existing FaxBack NSX server via its REST API
- No modifications to the existing fax server installation
- Microsoft Entra ID integration for authentication
- Database for persistent storage of user data, contacts, fax history, and audit logs

3. Portal Experience

The following describes what end users and administrators will experience when using the portal:

Login

A clean, branded login page. Users enter their credentials or click "Sign in with Microsoft" for SSO. Multi-factor authentication is enforced if configured in Entra ID.

Dashboard

At-a-glance overview showing unread fax count, faxes currently sending, recent activity feed, and quick-action buttons for common tasks.

Send a Fax

Simple compose form: pick a recipient from contacts or type a number, attach documents (drag and drop supported), optionally select a cover page template, type a cover message, and hit Send.

Bulk Send

Upload a CSV of recipients or add multiple numbers manually. One document set, many recipients, individual status tracking for each.

Inbox

List of received faxes sorted by date. Click any fax to preview as PDF directly in the browser. Download, mark read/unread, search by date or sender number.

Sent Items

Full history of sent faxes with delivery status. Click for detailed transmission info including connect time, speed, pages transferred, retry count, and any error details.

Live Status

Real-time view of faxes currently being sent or received. Progress updates automatically. Option to cancel an in-progress send.

Contacts

Personal address book with name, fax number, company, and notes. Organize with groups and favorites. Import and export via CSV.

Cover Pages

Upload RTF cover page templates. Templates support dynamic fields that auto-fill with sender info, recipient name, date, subject, and message body at send time.

Admin Panel

Office staff can link user accounts, monitor system health, and manage domain-wide settings and templates.

4. Deployment Options

The portal supports two deployment configurations. The recommended approach for initial launch is Option A.

	Option A — Self-Contained VPS	Option B — Azure PaaS Hybrid
Portal Hosting	Runs on the same Windows VPS as the fax server	Azure App Service (managed cloud)
Database	SQL Server (local installation)	Azure Cosmos DB
Fax Server Connection	Localhost — fastest, zero network exposure	Secure network connection back to VPS
Authentication	Entra ID (configured on server)	Entra ID (native Azure integration)
Scaling	Upgrade VPS resources as needed	Auto-scaling via Azure platform
Monthly Cost	VPS hosting only (already in place)	Azure App Service + Cosmos DB fees added to existing VPS cost

Option A — Self-Contained VPS

- ✓ Simplest architecture — everything runs on one server, nothing to coordinate
- ✓ Fastest performance — portal talks to fax server over localhost with zero latency
- ✓ Most secure — fax server API is never exposed to the internet
- ✓ No additional monthly costs — uses the existing VPS already in place
- ✓ Fastest to deploy — minimal infrastructure setup required
- ✗ Single point of failure — if the VPS goes down, both fax server and portal are affected
- ✗ Scaling requires upgrading the entire VPS rather than individual components
- ✗ Backups and disaster recovery must be managed manually

Option B — Azure PaaS Hybrid

- ✓ Portal and fax server are independent — one can go down without affecting the other
- ✓ Auto-scaling — Azure App Service scales automatically with user demand
- ✓ Managed infrastructure — Microsoft handles patching, updates, and availability
- ✓ Built-in redundancy and geo-replication options for disaster recovery
- ✓ Native Entra ID integration with Azure services
- ✗ Higher monthly cost — Azure App Service and Cosmos DB fees on top of existing VPS
- ✗ Added complexity — fax server API must be securely exposed over the network
- ✗ Latency — portal-to-fax-server calls travel over the network instead of localhost
- ✗ More moving parts to monitor and maintain across two environments

Recommendation: Option A is recommended for initial launch due to its simplicity, lower cost, and fastest time to go-live. Migration to Option B can be performed at any time in the future if scaling or high-availability requirements change.

5. Timeline & Milestones

Estimated project duration: **10 business days** from project kickoff.

Milestone	Deliverables	Timeline	Payment
Milestone 1 Code Complete	• Full portal application code delivered • All features functional in staging environment • Authentication, send/receive, contacts, cover pages, bulk send, live status, admin panel, audit logging • Client review and testing period	Days 1–7 Target: May 01, 2026	50% of total
Milestone 2 Deployment & Go-Live	• Installation on production server • Database setup and configuration • Entra ID integration and SSO setup • FaxBack API connection and testing • SSL/TLS certificate configuration • User acceptance testing • Go-live and handoff	Days 8–10 Target: May 08, 2026	50% of total

6. Investment

Description	Amount
Fax Portal — Full Development, Installation & Deployment	\$4,500

Payment	Trigger	Amount
Payment 1	Milestone 1 — Code complete and delivered for review	\$2,250
Payment 2	Milestone 2 — Installation, deployment, and go-live	\$2,250

7. Client Responsibilities

All server access, credentials, infrastructure, and third-party services required for the project will be provisioned and provided by Momentum Link Professionals as part of the engagement. The only requirement from H&F Communications is the following:

- Timely feedback — Responses to questions, review of deliverables, and approval of milestones within 1 business day to maintain the project timeline. Delays in client feedback may result in corresponding delays to the delivery schedule.

8. Scope Boundaries

Included

- Complete portal application — frontend, backend, and database schema
- Integration with existing FaxBack NSX server (no modifications to FaxBack)
- Microsoft Entra ID authentication setup
- Installation and deployment on the designated server
- Basic user documentation and walkthrough
- Full ongoing responsibility for the delivered product — Momentum Link Professionals stands behind its work and takes full ownership of any issues that arise

Not Included

- Modifications to the FaxBack NSX server software
- Procurement or licensing of SSL certificates, database software, or Azure services
- User training sessions (available as a separate engagement)
- HIPAA compliance audit or legal certification (portal is built with HIPAA-aligned safeguards; formal certification is the client's responsibility)
- Ongoing hosting, server maintenance, or infrastructure management
- Mobile native applications (portal is responsive and works on mobile browsers)
- Integration with third-party systems beyond FaxBack and Entra ID

9. Intellectual Property

Upon receipt of full payment, H&F Communications, Inc. will receive a perpetual, non-exclusive license to use, modify, and deploy the delivered portal application for its own business operations.

Momentum Link Professionals retains ownership of all underlying source code, architecture, design patterns, components, and libraries developed during this engagement. Momentum Link Professionals reserves the right to reuse any portion of the codebase, design, architecture, or implementation approach in other projects and for other clients.

Any proprietary business data, credentials, or confidential information belonging to H&F Communications will not be reused or shared. This clause applies solely to the software, design, and technical implementation.

H&F Communications' name, logo, and branding assets remain the exclusive property of H&F Communications and will not be used by Momentum Link Professionals outside the scope of this project without written consent.

10. Change Orders

Any changes to the scope defined in this document will be handled through a written change order process. Change orders will include a description of the requested change, impact on timeline, and any additional cost. No work outside the defined scope will begin without a signed change order from both parties.

11. Confidentiality

Both parties agree to keep confidential all proprietary information, credentials, system access details, and business information exchanged during the course of this project. This obligation survives the completion or termination of this engagement.

12. Acceptance

By signing below, both parties agree to the scope, timeline, payment terms, and conditions outlined in this Statement of Work.
